DHANUSH SRINATH

Data Engineer | Analytics Engineer | SQL | Python | PySpark | Databricks | PostgreSQL | Power BI
New York, NY | dhanush.srinath@yahoo.com | linkedin.com/in/dhanush-srinath-ds007 | dhanush-srinath007.github.io

PROFESSIONAL SUMMARY

Data Engineer and Analytics Engineer who designs data models, builds ETL/ELT data pipelines, and delivers business intelligence on Azure Databricks, PostgreSQL, and Power BI. Experienced in dimensional and normalized data modeling, data quality, data lineage, data migration, and source-system analysis across large-scale enterprise datasets. Partners with Product, Regulatory, Marketing, MLR, Finance, and Sales stakeholders to translate business requirements into reliable, auditable analytical datasets, KPIs, and executive reporting.

TECHNICAL SKILLS

Languages: SQL, T-SQL, Python, PySpark, Spark SQL, R, DAX, Power Query (M)
Data Platforms & Cloud: Azure Databricks, Databricks, Microsoft Fabric, Azure Data Lake, Azure Data Factory, AWS, Redshift
Databases: PostgreSQL, Oracle, MySQL, SQL Server (SSMS), Relational Databases, Data Warehousing, Data Lakes
Data Engineering: ETL/ELT, Data Pipelines, Data Modeling, Dimensional Modeling, Normalized Schemas, Schema Design, ERD, Source-to-Target Mapping, Data Migration, Data Integration, Data Lineage, Metadata Analysis
Data Quality & Governance: Data Quality, Data Validation, Data Profiling, Data Governance, Root-Cause Analysis, Audit Trails
BI & Analytics: Power BI, Power BI Service, Tableau, Excel, KPI Development, Dashboard Development, Executive Reporting, Statistical Analysis, Predictive Modeling, Machine Learning
Libraries & Tools: pandas, NumPy, scikit-learn, PyTorch, Git, GitHub, GitHub Copilot, Jupyter, VS Code, Veeva, SharePoint

PROFESSIONAL EXPERIENCE

Data Engineer (R&D) | Kenvue March 2026 – Present

- Designed the ERD and a normalized 5-schema PostgreSQL data architecture (ingestion, core, visibility, readiness, accuracy) with UUID surrogate keys, business-key uniqueness constraints, and fact-level data lineage for auditable data ingestion.
- Resolved data quality and data modeling issues across 100M+ records, diagnosing grain violations, duplicate mappings, and row-explosion problems through SQL optimization, data profiling, dimensional modeling, and root-cause analysis.
- Engineered the Product360 and Veeva integration architecture in Power BI, giving product-level visibility into claims, regulations, substantiations, formulation mapping, and project data for Marketing and MLR reporting.
- Developed advanced SQL transformations and business rules across 500K+ records for claims analytics, traceability, formulation mapping, product enrichment, and reusable analytical datasets.
- Reverse-engineered complex source-system architectures using metadata analysis, relationship discovery, object catalogs, and bridge-table identification to support data migration, data integration, and reporting modernization.
- Built executive Power BI dashboards integrating Databricks, SharePoint, Veeva, and Excel data sources, with DAX measures and Power Query transformations for distinct claim counts, YTD analytics, operational KPIs, and lifecycle-duration analysis.
- Operationalized enterprise reporting through Power BI Service deployment, scheduled refresh architecture, and gateway troubleshooting, and aligned source-system structures with business concepts as liaison between technical and business teams.

Business Intelligence Analyst | Element Technologies February 2024 – December 2025

- Engineered ETL data pipelines processing 10TB+ of data with PySpark, SQL, and Azure Databricks, improving data quality by 40% and automating 80% of recurring data validation checks.
- Led migration of key reporting assets from Azure and Power BI to Databricks, modernizing the data stack and ingesting structured and semi-structured data into data lakes and data warehouses.
- Optimized SQL and Spark SQL transformations using window functions and partitioning, reducing data inconsistencies by 10% and improving reliability of downstream analytical datasets.
- Delivered enterprise dashboards and KPI definitions in Power BI and Tableau for field-force operations, segmentation, and commercial insights across Product, Finance, Sales, Strategy, and Supply Chain teams.
- Improved forecast accuracy by 60% for executive decision-makers by building regression, classification, and time-series models in Python; supported testing, rollout, and training for self-service dashboards.

Business Intelligence Research Assistant | COLAI January 2024 – October 2024

- Analyzed GPU performance, supplier metrics, and training costs for LLM and time-series research, and built Tableau and Power BI dashboards for executive decision-making, vendor benchmarking, and pricing strategy.

Business Analyst | Northeastern University September 2022 – December 2023

- Built predictive models and donor segmentation in Python for university fundraising, increasing model accuracy by 15%, with Power BI and Tableau dashboards of donor behavior and demographics.
- Led customer segmentation and correlation analysis in Python and R for a fashion retailer's $10M loyalty program, contributing to a 40% increase in customer retention.

Data Security & Infrastructure Analyst | Aurigo Software Technologies January 2022 – September 2022

- Automated daily and weekly reporting pipelines covering 300+ IP addresses and six production servers across the US and Canada, saving 10 manual hours weekly and cutting critical issue detection latency by 15%.
- Identified and mitigated 10+ vulnerabilities through weekly CrowdStrike Falcon and Qualys scans, working with DevOps, CloudOps, and AzureOps teams on data validation, monitoring dashboards, and compliance reporting.

PROJECTS & PUBLICATION

- **Quest Zeal (published, IRJET):** AI question-and-answer generation and evaluation system built with Python, PyTorch, NLP, and Flask. github.com/Dhanush-Srinath007/Quest_Zeal
- **RedEye Campus Safety:** Geospatial analysis of Boston crime data with Python, GeoPandas, and Matplotlib to re-prioritize late-night safety ride coverage.
- **E-commerce Data Model:** Normalized relational database design from entity-relationship model to MySQL schema.

CERTIFICATIONS

Microsoft Certified: Fabric Analytics Engineer (2024 – 2028) | Databricks Certified Data Engineer Associate (issued 2024) | Databricks Generative AI Fundamentals | Qualys Certified Specialist (2022)

EDUCATION

Master of Science, Business Analytics | Northeastern University, D'Amore-McKim School of Business, Boston, MA | GPA 3.8/4.0

Bachelor of Engineering, Computer Science | JSS Science and Technology University (SJCE), Mysore, India
